

## Paint spray gun K35 H.V.L.P.

code: SP703-35-013 [nozzle 1.3]

code: SP703-35-017 [nozzle 1.7]

### TECHNICAL PARAMETERS

Technology	Operating pressure [bar]	Air consumption [l/min]	Capacity of cup [ml]	Air inlet	Weight [g]
H.V.L.P.	1.5 - 3.0	340	600	1/4"	590

## INFORMATION

**K35 H.V.L.P.** (*High Volume Low Pressure*) is a low pressure paint spray gun.

Modern H.V.L.P. technology allows to reduce significantly the amount of material sprayed and reduce air consumption. The K35 spray gun provides superior paint sprayability at low pressure. It reduces significantly material losses during painting compared to paint guns made in HP technology.

The K35 spray gun is equipped **with three basic adjustments: paint volume, spray width and air supply**. The nozzle and needle are made of stainless steel. The simple and robust design makes the gun easy to clean. Low weight [590g] reduces the feeling of fatigue during work.

K35 allows to paint surfaces with acrylic and waterborne paints. The comfort of long work is ensured by the lightweight, profiled gun design and the ergonomics of the body grip.

The gun can be used for painting jobs with the application of both primers and topcoats.
